ASSET RECOVERY CORPORATION RECEIVES ISO 14001:2004 ENVIRONMENTAL MANAGEMENT SYSTEM CERTIFICATION

September 28, 2010 – Saint Paul, Minn. – Asset Recovery Corporation, a leader in environmentally-sound IT asset disposal solutions, announced today that it has received ISO 14001: 2004 Environmental Management System (EMS) certification from SGS for the environmentally responsible recycling of eWaste, including demanufacture, resale of electronics, and the separation of material into re-salable commodities.

ISO 14001: 2004, an internationally recognized standard for EMS, helps organizations demonstrate environmental commitment to their stakeholders – clients, employees, shareholders – while better managing environmental impact and risk. Organizations seeking ISO 14001: 2004 certification must identify significant impacts – such as carbon emissions, resource use, energy consumption – and implement environmental management programs to control and improve them.

“Achieving this certification is a significant milestone in Asset Recovery Corporation’s environmental journey, and it is due in large part to the efforts of our people,” said Marshall Johnson, CEO. “They bring our commitment to environmental stewardship to life every day through a host of initiatives in the communities where we live and work.”

Asset Recovery Corporation’s environmental efforts include programs to measure and manage aggregate environmental impact, and to engage employees in these efforts through training, local action teams and special events.

“SGS is pleased to award Asset Recovery Corporation certification to ISO 14001: 2004,” said Zachary C. Pivarnik, Accreditation Manager, North America. “The company has embraced and implemented the principles of this Environmental Management System and we are confident that it will seek to continually improve its environmental programs.”
